# Clariti

Inspection Feature

Take your office anywhere with Clariti's fully incorporated mobile application designed to make every inspection more efficient. With a single sign-on (SSO), access everything you need to get the job done quickly, wherever your day may take you.

Be in the field, 100% of the time.

Features

Mobile Inspections

Work from any device in the field using the mobile inspections app that works whether you're connected or offline. Inspectors can access editable run sheets; submit a request for re-inspection directly from an application; create inspection records; add comments directly onto a record; and capture photos and videos with geolocation attached to ensure data accuracy. All inputted information is saved to the permanent record.

Inspections Routing

Using the GIS Map Viewer, inspectors can visualize locations with an address or current location, and optimize their daily inspections route to avoid travel delays. All that's needed to be on their way is a date range to easily organize the day's itinerary based on priority, travel time, or current location. Automatic notifications will also notify inspectors of an itinerary change, even if it happens mid-shift.

Easy Requests

Constituents can request inspections and submit complaints directly via your online portal, and check for status updates at any time. Submitted requests are then automatically linked to the parcel and submitters record, and sent to your back office via email or push notification to a mobile device.

Automated Alerts

When a violation is encountered during an inspection - whether triggered by the system or inspector - responsible party information is automatically populated from the original inspection or complaint onto the record, and added to the next scheduled inspection (if one exists). If not, a new inspection is created and scheduled for the record.

Practical Templates

Access pre-built inspection templates in the field to ensure code compliance and accuracy, including for: violation triggers, default standard comments, and automated reinspection due dates based on ordinance codes.
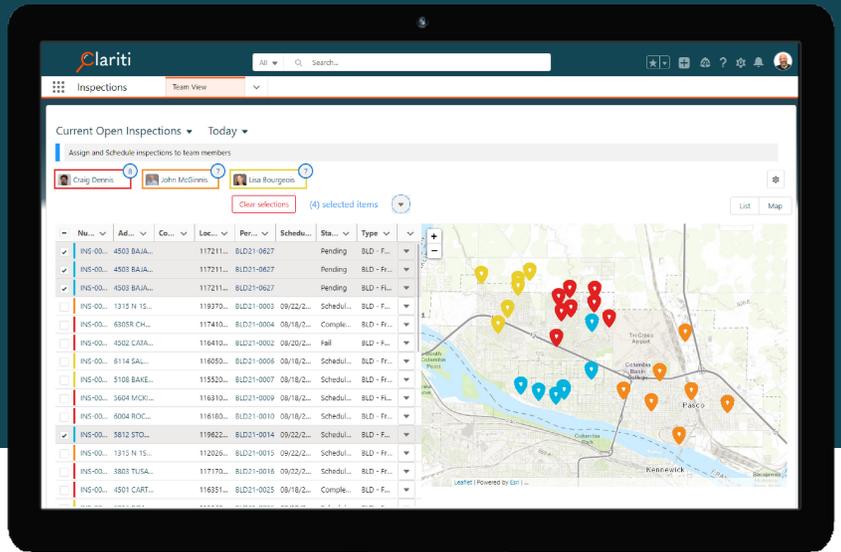

Sophisticated Reporting

View your current workload, analyze key metrics, and evaluate performance with easy-to-read dashboards and reports. View real-time data such as your inspection queue or unassigned inspections on a centralized dashboard, and create reports using any information - the possibilities are limitless.

Designed to Simplify Complex Inspections

Benefits

For Managers

- ✓ Enable online inspection requests via your community portal

- ✓ Use GIS to create smart run sheets that take into account drive time and traffic

- ✓ Monitor the performance of your team with real-time dashboards

- ✓ Reduce omissions and errors with code violation triggers

- ✓ Simplify transactions with automated fee generation and online payments

For Inspectors

- ✓ Conduct inspections on a mobile device

- ✓ View all current and historical inspection, code enforcement, and permit data

- ✓ Access customized checklists for inspections based on permit type, location, and more

- ✓ Book re-inspections from the field

- ✓ File inspections reports from the field in real-time. No need to go back to the office

Helping Governments Deliver Exceptional Permitting and Licensing Experiences
